Added the ability to delete archived modules

Previously, instructors had to restore archived modules first in order to delete them. Instructors can now select and restore or delete archived modules from under Manage >> Restore.

Restoring archived modules...

<input type="checkbox"/> Select Modules to restore to "active" list	Date Archived
<input type="checkbox"/> Introductions & Ground Rules	2009-Nov-2 01:50 PM
<input type="checkbox"/> Module 12 - Miscellaneous Features	2010-Jan-3 02:13 PM
<input type="checkbox"/> Module 13 - My Workspace	2010-Jan-3 02:13 PM

Enhancements

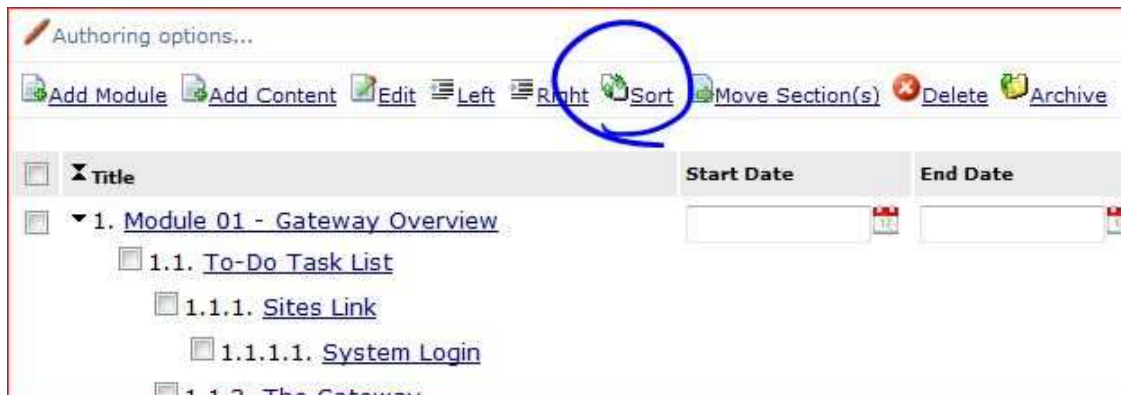

Accessibility enhancements

- Replaced all images with standard action buttons.
- Added access key support to core action buttons.
- Improved support for tabbing / navigation with the keyboard.
- Added missing Alt tags.
- Added summaries to data tables for blind users.
- Made action items clickable - not just the text link.

Enable instructors to preview closed modules in View mode

Instructors can now navigate through modules (under "View"), even if they are closed for students. This was needed so that instructors can preview their content without having to log in as students.

Moved "sort" feature to main author list page to improve efficiency

This feature was buried under Manage. As it is a common function, it is now in the main author page.

Added more pagination options for managing content

Added 'show 100' and 'show all' viewing pagination options under Manage >> Manage Content. Previously, instructors were limited to viewing a list of only 30 resources at a time.

Added a "Select All" checkbox under Manage >> Restore page to improve efficiency

 **Eliminated final deletion confirmation**

There were too many levels of confirmations for proceeding with deletion of modules and sections. "Are you sure?" is what's left now, with the option to proceed or cancel the action.

 **Removed additional confirmation page for restoring modules**

Restore or Cancel are the default options available in this view.

 **Bring in all resource items with IMS CP import / export and import from site**

If an instructor has uploaded resources under Manage >> Manage Content, harvest it all (even if the resources are unreferenced in the content) and copy it to the new site with import from site or IMS CP export / import.

 **Replaced O'Reily's upload filter in Sferyx Editor with Sakai's request filter**

The change of the dependency on the O'Reily filter with the Sferyx Editor also eliminates O'Reily's upload file limit of 1MB for embedded resources. The file upload limit is now 5MB, like with FCK Editor.

 **Upgrade Sferyx Editor to latest version**

Deployed latest version of Sferyx Editor. Improved loading. Users will need to accept certificate.

 **Add instructions at the top of print html page to save as pdf**

This is to encourage saving modules as pdf files as opposing to printing.

 **Adjust columns in list views to improve rendering of lengthy titles**

Adjusted columns in author and student list views to make more room for lengthy module and section titles. This was particularly problematic with Internet Explorer 8.
